AUTOMATING DATA POPULATION IN SERVICENOW: STREAMLINING PROGRAM MANAGEMENT

ABSTRACT :

USER STORY :

As an IT administrator at a company using ServiceNow, you have been tasked with setting up a data lookup mechanism. This mechanism will help automatically populate certain fields in a custom table called "Program" based on predefined values in another table called "testing lookups". The "Program" table includes fields for technology, tracker, and trainer. The "testing lookups" table contains the same fields and will provide the values used for the lookup.

PRE-REQUISITES :

1. Knowledge on: Applications, Tables, Fields.
2. Knowledge on: Data lookup Definitions.

SKILLS USED TO SOLVE THE PROBLEM STATEMENT :

1. Service Now Administration.

TWO MAJOR METHOD :

- Implementation
- Result

IMPLEMENTATION:

Step 1 : Creating Custom Table

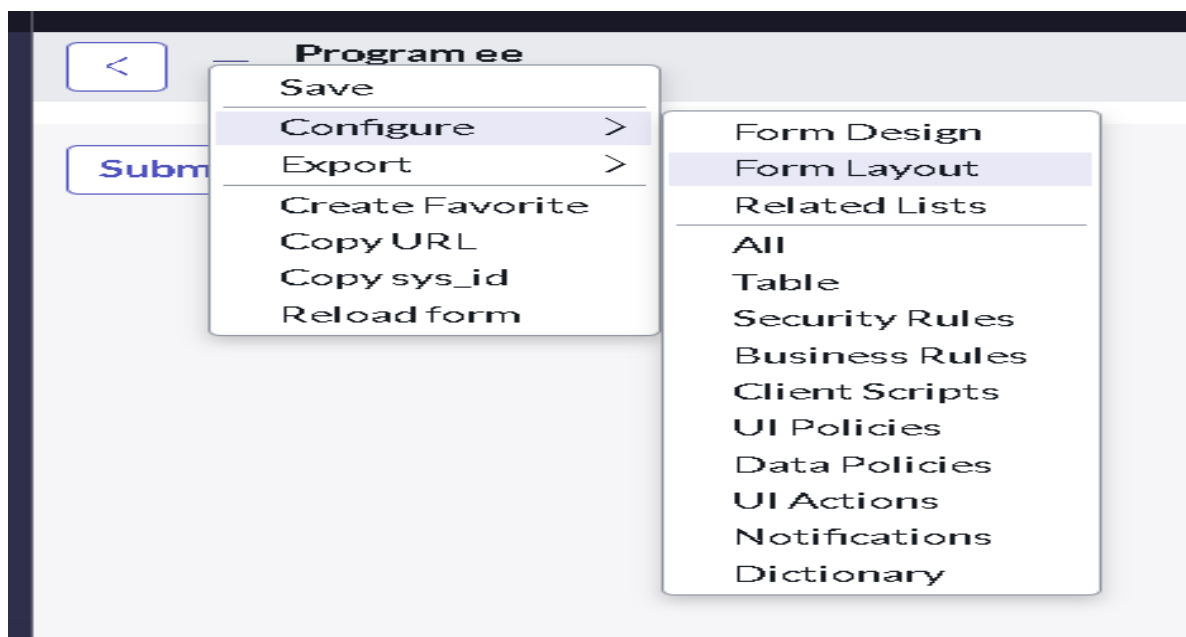

1. Open “Tables” >> New.
2. Give the label name as “ program ”.
3. Click on Submit

The screenshot shows the ServiceNow interface for creating a new table. The browser address bar shows the URL: `dev199400.service-now.com/now/nav/ui/classic/params/target/sys_db_object.do%3Fsys_id%3D6f8946c483b91210139a96a6fead3eb%26sysparm_record_target%3Dsys...`. The page title is "Table - Program". Below the title, there is a description: "A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)". The form contains the following fields:

- * Label:
- * Name:
- Application:
- Technology:
- Tracker:
- Trainer:

Buttons at the top right include "Delete", "Update", and "Delete All Records".

4. Click on new to open record, click on the Additional Actions and go to configure >> select Form Layout

5. Create fields as
 - a. Name : Technology
 - b. Type : choice
6. Click on Add
7. And follow the same instructions
8. For two more fields are
 - a. Tracker
 - b. Trainer
9. Add them and click on save

program
New record

technology -- None --

tracker -- None --

tranier -- None --

Submit

10. Now right click on “ technology ” field click on Configure Choices.
11. Enter the item as “ Salesforce ” and click on Add.
12. Add two more items
 - a. ServiceNow
 - b. Testing
13. Click on save.

Remove

Move up
Move down

Save Cancel

Enter new item: Add

14. Follow the same steps from 9 to 13 for remaining two fields.
15. Tracker values are:
 - a. Admin
 - b. Developer
16. Trainer values are:
 - a. Rakesh
 - b. Tarakesh
 - c. Ajay
 - d. Phani
 - e. Shivam
17. Click on save.

Step 2 : Creating a custom matcher table.

1. Open “Tables” >> New.
2. Give the label name as “ testing lookup ”.
3. Add “ Matcher Field Definition ” in the Extends table field.
4. Click on Submit.

The screenshot shows the SAP configuration form for a new table named 'testing lookup'. The form includes a header bar with navigation icons and buttons for 'Delete', 'Update', and 'Delete All F'. Below the header, a blue informational box explains that a table is a collection of records in the database. The main form area contains several fields: 'Label' (testing lookup), 'Name' (u_testing_lookup), 'Extends table' (Matcher Field Definitions), 'Application' (Global), 'Technology' (None), 'Tracker' (None), and 'Trainer' (None). Each field has a corresponding information icon.

* Label	testing lookup	Application	Global
* Name	u_testing_lookup	Technology	-- None --
Extends table	Matcher Field Definitions	Tracker	-- None --
		Trainer	-- None --

5. Follow the same steps from 4 to 17 from “ step - 1 ”.
6. And add another field from the Form Layout that is “ order ”.
7. Click on save.

Step 3 : Create records in matcher table

1. Follow the below figure to create a record.

< Table testing lookup 🔍 ⋮ Delete Update Delete All Records ↑

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)

* Label

Step 4 : Create Data Lookup Definition to automate the trainer

1. Search for Data Lookup Definition in All navigation.
2. Click on new.
3. Give name as “ program data lookup ”
4. Select the source table as “ program ”.
5. Select the matcher table as “ testing lookup ”.
6. Click on submit.

Data Lookup Definitions
New record

* Name Application

* Source Table Active ☒

* Matcher Table Run on form change ☒

Run on insert ☒

Run on update ☐

7. Again open the “ program data lookup ” record.
8. Scroll down under matcher field definitions and click on new.
9. Select the source table field : technology
10. And select the matcher table field : technology
11. Exact lookup match : checked.
12. Click on Submit.

Matcher Field Definitions
New record

Data Lookup Application

* Source table field Exact lookup match ☒

* Matcher table field

13. And create another Matcher field definitions for another field : tracker
14. Click on Setter field definition and click on new
15. Select the source table field : trainer
16. And select the matcher table field : trainer
17. Always replace the field : checked.
18. Click on Submit.

Setter Field Definitions

CONCLUSION:

The automation of data population in ServiceNow significantly enhances the efficiency and effectiveness of program management. By eliminating manual data entry, organizations can reduce human error, save time, and improve the accuracy of critical information. Automation also fosters real-time data integration, allowing program managers to make more informed decisions based on up-to-date insights.

Moreover, streamlining the process through automated data population empowers teams to focus on higher-value activities, such as strategic planning and proactive issue resolution, rather than time-consuming administrative tasks. This leads to improved collaboration, faster response times, and a more agile program management environment.

Ultimately, automating data population in ServiceNow not only boosts operational productivity but also contributes to overall program success, enabling organizations to deliver projects on time, within scope, and with greater alignment to business goals. As companies continue to embrace digital transformation, such automation will remain a critical enabler of seamless program management in the future.
